

InhibiWear HB-CR

Chemical-Resistant High-Build Coating System

System Description:

This system consists of a chemical-resistant epoxy primer top coated with a highly chemical-resistant novalac epoxy. This semi-gloss coating system is designed to withstand a wide array of chemical contact including strong acids, caustics and solvents. Suited for general-use areas requiring excellent overall chemical resistance.

System Advantages:

- Available in a wide array of colors
- Excellent impact and abrasion resistance
- Excellent chemical resistance
- Extremely hard, semi-gloss finish

System Installation Overview:

1. Apply Protect 1000 CR primer to properly prepared substrate and allow to cure
2. Apply Protect 1750 Novalac epoxy coating and allow to cure
