

InhibiWear HB-TS

Thermal-Shock Resistant High-Build Coating System

System Description:

This system consists of a self-priming, self-leveling, thermal shock-resistant urethane concrete high-build concrete overlay. This system exhibits thermal expansion rates similar to that of concrete, making it an ideal general-use choice for areas exposed to hot and cold-water washdowns. Ideally suited for general food prep areas where an economical protective concrete coating with thermal-shock resistance characteristics is required.

System Advantages:

- Self-priming
- Self-leveling
- Excellent thermal-shock resistance
- Easy to clean and maintain

System Installation Overview:

1. Apply Protect UC-FC to properly prepared substrate and allow to cure
