

## InhibiWear MT-Flex Resilient Mortar System

### System Description:

A heavy-duty, flexible mortar system consisting of an epoxy primer followed by an application of a flexible epoxy/urethane hybrid coating. The system is then topped with a highly resilient epoxy mortar. An epoxy grout coat completes the system. This mortar system will resurface badly damaged concrete to a new, more durable surface, and is suited for MEP, interstitial floors, liquid processing and elevated areas requiring a very resilient flooring overlay.

### System Advantages:

- Very durable
- very good chemical resistance
- Resurfaces damaged concrete substrates
- Very good impact and abrasion resistance
- flexible system for unique applications
- Available in a wide array of colors

### System Installation Overview:

1. Apply Protect 1000 HB primer to properly prepared substrate and allow to cure
2. Apply Protect 1800 Flex flexible epoxy system and allow to cure
3. Apply Protect 3800 TSR epoxy mortar system and allow to cure
4. Apply Protect 1000 Grout epoxy grout coat and allow to cure
