

## RestaurantSpec ST Smooth Antimicrobial Seamless Flooring System

### System Description:

A high-performance smooth-finish antimicrobial flooring system consisting of an antimicrobial concrete pretreatment, followed by an antimicrobial urethane concrete application, top coated with a high-performance antimicrobial urethane. This system is formulated for use in kitchens requiring a smooth finish that is resistant to thermal cycling, cleaning chemicals and kitchen oils and grease.

### System Advantages:

- Redundant system protects against microbe growth
- Antimicrobial protection penetrates up to 6" within concrete slab
- Seamless, no grout lines
- Easy to clean and sanitize
- USDA-compliant/CFIA-approved
- Quick turnaround minimizes downtime
- Antimicrobial properties effective for life of floor system

### System Installation Overview:

1. Dampen concrete substrate prior to applying Protect AM-PT
2. Spray-apply Protect AM-PT in two passes and allow to fully purge concrete
3. Apply Protect AM-UC-LM and allow to cure
4. Apply Protect 2000 AM-S topcoat and allow to cure
